WORK EXPERIENCE

Software Development Engineer II

Amazon

12/2016 – Present

Hyderabad, India

Tasks/Achievements

- Developed a service that puts infrequently accessed data in cold tier
- Created streamlined and seamless access for Hot and Cold Data
- Bootstrapped a generic data pipeline platform for Amazon Retail
- Developed a platform that enables auto-healing of services in despair
- Tech: Java, DynamoDB, S3, EMR

Sr. Software Engineer

Practo

04/2016 – 11/2016

Bangalore, India

Tasks/Achievements

- Developed the tool that enables incremental release of products
- Built the product that identifies anomalies in real time
- Built the core database service that ensures high horizontal scalability and high availability
- Tech: Python, Flask, Java, MySQL, MongoDB, Boto3

Software Engineer

Practo

09/2015 – 03/2016

Bangalore, India

Tasks/Achievements

- Honoured with Star Employee Award
- Built the tool used for dummy data population across products
- Built the tool used for managing and provisioning staging environment, instances and infrastructure
- Zero downtime and Zero impact migration of Practo's Staging Infrastructure to a different AWS Region.
- Tech: Puppet, Vagrant, Python, Flask, Boto3, Semantic UI

Software Associate

Saba Softwares India Pvt. Ltd.

07/2012 – 07/2013

Pune, India

Tasks/Achievements

- Developed Offline reviews feature in Saba's SPC Product
- Developed Language Check feature for Saba's Internal Tool

EDUCATION

M.Tech in Computer Science

IIIT, Hyderabad (9.02/10)

07/2013 – 05/2015

Hyderabad, India

B. Tech in Information Technology

College of Engineering, Pune (8.56/10)

07/2008 – 06/2012

Pune, India

SKILLS & COMPETENCIES

NodeJS

Python

Java

Golang

Ansible

Puppet

Kafka

GraphQL

MongoDB

Redis

Design

Amazon Web Services

PROJECTS

Tripod - Fast and Optimal In Memory Prefix Search

- Optimal and Predictable memory allocation for operations
- Uses Trie as data structure and written in Golang

FlaskSR - Enable streaming of partial HTTP Responses

- Enables prioritized rendering of HTTP components in Flask
- Better First Time To Paint and thus the UX for flask based services

Facebook Messenger Bot for Online Shopping

- Bot enables purchasing any product directly through the messenger
- It answers any fashion related questions and queries

Aligning Cricket Match Reports to Commentaries

- Identifies important event from a Match Report
- Maps these events to corresponding balls in commentaries

Detection of Memory Leaks and Uninitialized Variables

- Uses dynamic analysis and binary instrumentation to identify flaws
- More efficient in finding runtime bugs than any Static Analysis Tool

WikiSe - A search engine build on top of Wikipedia Dump

- Bootstrapped a generic TF-IDF based search engine
- Tries to directly answer the query that could be, using Infobox data
